

PASSENGER CONTACT INFORMATION

Important Guidelines from Air Canada and IATA

IMPORTANT: In accordance with IATA Travel Agency Handbook Resolution 830d, all travel service providers are required to include passenger contact information in the Passenger Name Record (PNR) so that travellers can be advised of last minute flight schedule changes, disruptions or irregular operations.

Air travel can sometimes be unpredictable. In order to facilitate a seamless passenger experience when disruptions occur, Air Canada requires that all trade partners include the correct contact information for travellers in the PNR (email and/or mobile phone number) using industry standard SSR CTCE or SSR CTCM formats.

Air Canada may need to contact travellers using information from the PNR in the event:

- of an IRROP and the traveller is rebooked, an automatic notification can be sent by email or text to the contact provided;
- they have been separated from their luggage and it has now been retrieved.

For your guidance, please refer to the specific GDS formats below for inputting passengers contact information in the PNR.

Note:

- Optional language identifier may be included, e.g. EN, FR, ES, DE, IT
- // represents the @ (at sign) if required for an email address
- .. represents the _ (underscore) if required an email address
- ./ is represents the – (hyphen) if required for an email address

Should a traveller refuse to provide their contact information, SSR CTCR must be added to the PNR.

For additional support, please refer to your GDS Help Pages or contact your GDS Help Desk.

Note: Spacing is provided for clarity. Some GDS may not support spaces in actual transactions.
